Integrated Raygun Business Services

GPS Tracker Installations and Maintenance

1. **Installation:** Install trackers with independent backup batteries.
2. **Monitoring:** Use live GPS mapping and historical breadcrumb trails to track route patterns and identify regular parking spots.
3. **Alerts:** Set up instant notifications for geofence breaches (e.g., leaving a County) and device power-cuts or tampering.
4. **Analytics:** Mine historical data to pinpoint the asset's "sleeping spot"—where it consistently parks between 1:00 AM and 5:00 AM.
5. **Tracking Reports:** Generate tamper-proof, time-stamped activity logs to serve as proof of presence before dispatching field agents.

Asset Recovery

1. Tracing
 - **GPS Tracking:** Ping device locators, check telematics history, or use remote immobilization data to pinpoint coordinates.
 - **Field Reconnaissance:** Visit registered home or workplace addresses provided by the financing company to confirm asset placement.
 - **Skip Tracing:** Run background checks, contact references, and check public records if the debtor has vanished with the asset.
2. Recovery
 - **Voluntary Surrender:** Negotiate with the debtor to hand over keys or devices peacefully, using scripts authorized by the financing company.
 - **Lawful Asset Recovery and Repossession Support.** Lawful recovery and repossession support, Peaceful recovery procedures, Recovery in accordance with client instructions and applicable law
 - **Remote Disabling:** Coordinate with the financing company to lock mobile phones remotely via MDM (Mobile Device Management) software to incentivize return.
3. Transport
 - **Secured Towing:** Use flatbeds or specialized equipment to transport vehicles and motorcycles without causing mechanical damage.
 - **Secure Storage:** Move recovered assets to a gated, monitored impound yard or a locked facility specifically for mobile electronics.
 - **Safe Handover Transits:** Pack high-value phones in tamper-evident, padded transit bags to protect them from theft or breakage during movement.
4. Documentation
 - **Condition Report:** Take high-resolution photos and document pre-existing damages, current mileage, and fuel levels on a digital intake form.
 - **Inventory Log:** List all personal belongings found inside vehicles or accessories attached to the recovered phones.
 - **Repossession Notice:** Complete the legally required field seizure notices and provide a copy to the debtor and local authorities if needed.
5. Handover
 - **Client Inspection:** Present the asset and the completed digital condition logs to the financing company's representative for verification.
 - **Custody Sign-Off:** Execute a formal transfer-of-liability document signed by your field team and the client's receiving agent.

Emergency Response

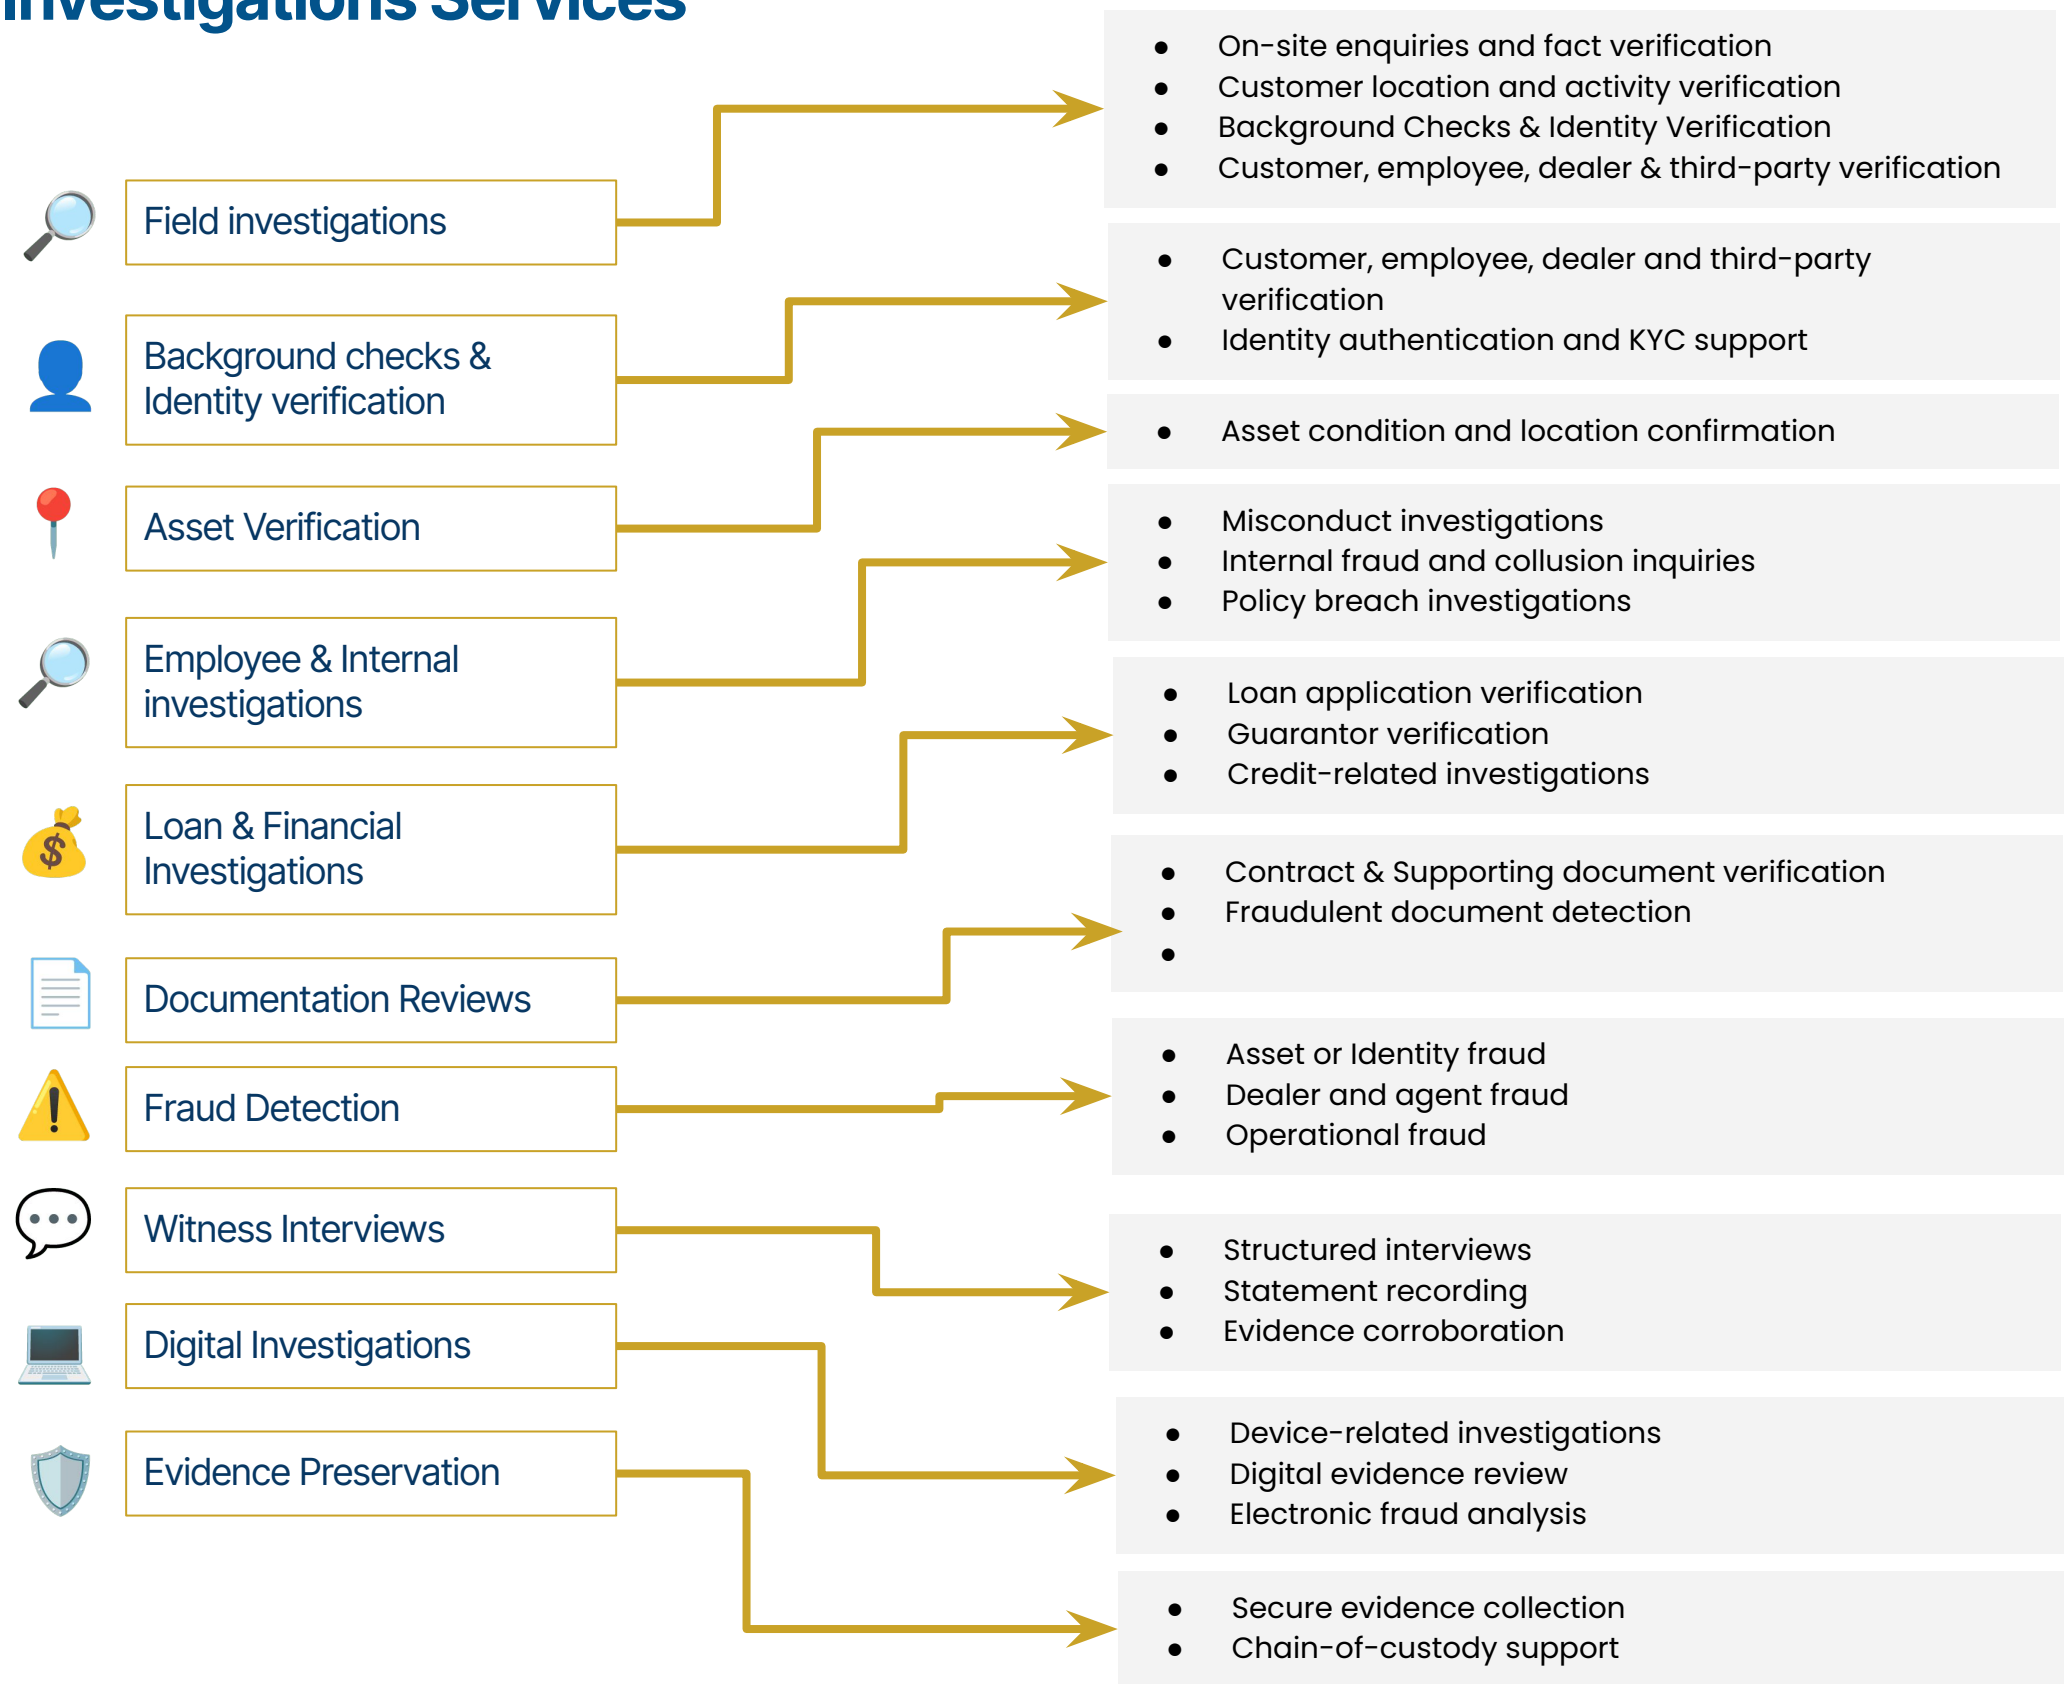

1. **Emergency Call:** The workflow initiates with a distress signal from the public via an emergency line, where dispatchers capture the immediate situation.
2. **Incident Logging:** The details of the emergency are recorded in the central dispatch database, generating an active case file.
3. **GPS Monitoring:** The system tracks the exact location of the caller and available response units in real-time to determine the closest available help.
4. **Field Deployment:** Paramedics, medical personnel, or other primary responders are dispatched to the incident location.
5. **Police Coordination:** Local law enforcement is notified and integrated into the scene for safety, traffic control, or criminal investigation.
6. **Recovery:** First responders secure the scene, stabilize victims, and manage the immediate aftermath of the crisis.
7. **Case Closure:** All actions are documented, reports are finalized, and the emergency case is officially closed within the [Example Location Finder](#) tracking system.
